# PREDICTION & RISK

## 📊 Business Insights – Churn Risk Analysis

- **Contract Type Risk:**
- Customers on **month-to-month contracts dominate predicted churn (530)**, while churn drops drastically for longer commitments (only 16 for one-year and 0 for two-year contracts).
- 👉 This indicates that **lack of long-term commitment is the strongest driver of churn**.

- **Customer Lifecycle Risk:**
- Churn is heavily concentrated among **new customers**, with **291 churns in the first year**, gradually decreasing as tenure increases.
- 👉 This suggests that **early-stage customer experience is critical**, and dissatisfaction occurs quickly if not addressed.

- **Combined Risk Insight (Key Takeaway):**
- The **highest-risk segment = new customers (≤1 year) on month-to-month contracts**.
- 👉 These customers are not yet loyal and can leave easily due to low switching costs.

- **Business Recommendation:**
- Focus on:
  - Converting month-to-month users to **long-term contracts**
  - Improving **onboarding and early engagement (first 1 year)**
  - Offering **incentives or support** during initial months

👉 Addressing this segment can significantly reduce overall churn and protect future revenue.
